ENVIRONMENTAL COORDINATOR
450 110th Ave NE., P.O. BOX 90012
BELLEVUE, WA 98009-9012

OPTIONAL DETERMINATION OF NON-SIGNIFICANCE (DNS) NOTICE MATERIALS

The attached materials are being sent to you pursuant to the requirements for the Optional DNS Process (WAC 197-11-355). A DNS on the attached proposal is likely. This may be the only opportunity to comment on environmental impacts of the proposal. Mitigation measures from standard codes will apply. Project review may require mitigation regardless of whether an EIS is prepared. A copy of the subsequent threshold determination for this proposal may be obtained upon request.

File No. 16-131862-LO

Project Name/Address: Bryant Retaining Wall/5402 119th Ave SE

Planner: Drew Folsom

ENVIRONMENTAL CHECKLIST

10/9/2009

Thank you in advance for your cooperation and adherence to these procedures. If you need assistance in completing the checklist or have any questions regarding the environmental review process, please visit or call Development Services (425-452-6800) between 8 a.m. and 4 p.m., Monday through Friday (Wednesday, 10 to 4). Assistance for the hearing impaired: Dial 711 (Telecommunications Relay Service).

INTRODUCTION**Purpose of the Checklist:**

The State Environmental Policy Act (SEPA), Chapter 43.21c RCW, requires all governmental agencies to consider the environmental impacts of a proposal before making decisions. An environmental impact statement (EIS) must be prepared for all proposals with probable significant adverse impacts on the quality of the environment. The purpose of this checklist is to provide information to help you and the City of Bellevue identify impacts from your proposal (and to reduce or avoid impacts from the proposal, if it can be done) and to help the City decide whether an EIS is required.

Instructions for Applicants:

This environmental checklist asks you to describe some basic information about your proposal. Answer the questions briefly, with the most precise information known, or give the best description you can. You must answer each question accurately and carefully, to the best of your knowledge. In most cases, you should be able to answer the questions from your own observations or project plans without the need to hire experts. If you really do not know the answer or if a question does not apply to your proposal, write "do not know" or "does not apply." Giving complete answers to the questions now may avoid unnecessary delays later.

Some questions ask about governmental regulations such as zoning, shoreline, and landmark designations. Answer these questions if you can. If you have problems, the Planner in the Permit Center can assist you.

The checklist questions apply to all parts of your proposal, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. Include reference to any reports on studies that you are aware of which are relevant to the answers you provide. The City may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impacts.

Use of a Checklist for Nonproject Proposals: *A nonproject proposal includes plans, policies, and programs where actions are different or broader than a single site-specific proposal.*

For nonproject proposals, complete the Environmental Checklist even though you may answer "does not apply" to most questions. In addition, complete the Supplemental Sheet for Nonproject Actions available from Permit Processing.

For nonproject actions, the references in the checklist to the words *project*, *applicant*, and *property* or *site* should be read as *proposal*, *proposer*, and *affected geographic area*, respectively.

Attach an 8 ½" x 11 vicinity map which accurately locates the proposed site.

BACKGROUND INFORMATION

Property Owner: **Joe Bryant**

Proponent: **Joe Bryant**
5402 119th Avenue SE
Bellevue, WA 98006

Contact Person: **Clover Muters, The Watershed Company**
(If different from the owner. All questions and correspondence will be directed to the individual listed.)

Address: **750 Sixth Street South, Kirkland, WA 98033**

Phone: **(425) 822-5242**

Proposal Title: **Bryant Retaining Wall Violation Correction**

Proposal Location: **5402 119th Avenue SE Bellevue, WA 98006 (Parcel 6071200960)**
(Street address and nearest cross street or intersection) Provide a legal description if available.

Please attach an 8 ½" x 11" vicinity map that accurately locates the proposal site.

Give an accurate, brief description of the proposal's scope and nature:

1. General description: **The project proposes to lower an unpermitted retaining wall in a steep slope buffer, remove fill placed behind the wall, regrade to a slope closer to the pre-impact condition, and mitigate for remaining impacts with native vegetation plantings.**
2. Acreage of site: **0.37 acres**
3. Number of dwelling units/buildings to be demolished: **0**
4. Number of dwelling units/buildings to be constructed: **0**
5. Square footage of buildings to be demolished: **NA**
6. Square footage of buildings to be constructed: **NA**
7. Quantity of earth movement (in cubic yards): **Existing fill to be removed: 128 Cubic Yards, New fill to be imported: 81 Cubic yards of topsoil**
8. Proposed land use: **Residential**
9. Design features, including building height, number of stories and proposed exterior materials:
4' cement retaining wall, restoration plantings

Estimated date of completion of the proposal or timing of phasing:

The project will be completed as soon as City approval is received. The proposal offers corrective action for a violation which the city requests be remedied as soon as possible.

Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.

No

DF 7/6/16

List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

- **Critical Areas Narrative Description**
- **Restoration Plan**

Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain. List dates applied for and file numbers, if known.

None known

List any government approvals or permits that will be needed for your proposal, if known. If permits have been applied for, list application date and file numbers, if known.

- **City of Bellevue Critical Areas Land Use Permit**
- **City of Bellevue Clearing and Grading Permit**

Please provide one or more of the following exhibits, if applicable to your proposal.
(Please check appropriate box(es) for exhibits submitted with your proposal):

- ☐ **Land Use Reclassification (rezone) Map of existing and proposed zoning**
- ☐ **Preliminary Plat or Planned Unit Development**
Preliminary plat map
- ☒ **Clearing & Grading Permit**
Plan of existing and proposed
grading Development plans
- ☐ **Building Permit (or Design
Review) Site plan Clearing &
grading plan**
- ☐ **Shoreline Management Permit**
Site plan

A. ENVIRONMENTAL ELEMENTS

1. Earth

a. General description of the site: ☐ Flat ☐ Rolling ☐ Hilly ☒ Steep slopes ☐ Mountains ☐ Other

b. What is the steepest slope on the site (approximate percent slope)?

The steepest slope on site is approximately ~40%. A portion of the site is within a steep slope geohazard area.

c. What general types of soil are found on the site (for example, clay, sand, gravel, peat, and muck)? If you know the classification of agricultural soils, specify them and note any prime farmland.

The USDA Natural Resources Conservation Service maps the majority of the site as Alderwood and Kitsap soils on very steep slopes. The western end of the site, near the existing development is mapped as Arents, Alderwood material on 6 to 15 percent slopes. Currently, the area west of the retaining wall consists of several feet of fill material.

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

The site includes a steep slope geohazard area. The property owner reports that an upper terrace area immediately behind the house was originally flat and stable. However, following City road

work in 2006 the land began to slip. The apparent cause of this was a leak in a City pipe which runs along the side of the property and discharges on the slope below. The leak was fixed, however the owner reports the land continues to sink which led to the construction of the retaining wall. During a site visit performed on March 24, 2016, cracks were observed in the new fill placed behind the retaining wall, near the location of the City pipe.

- e. Describe the purpose, type, and approximate quantities of any filling or grading proposed. Indicate source of fill.

Unpermitted installation of an approximately 10-foot-high, poured in place concrete retaining wall, six-foot board fence and placement of a large quantity of fill behind the wall took place, such that a formerly sloped yard area behind the existing residence on site is now flat. The wall will be reduced to four feet and the yard will be graded to restore the area behind the wall to a slope closer to the pre-impact conditions. A majority of the unpermitted fill will be removed and the area restored with native vegetation.

- f. Could erosion occur as a result of clearing, construction, or use? If so, generally describe.

The site currently contains exposed fill material and virtually no vegetation behind the wall. No additional vegetation will be removed. Downslope of the wall intact forest is present. Precautions will be taken to avoid erosion during construction through best management practices. The installation of native plants will help reduce the risk of erosion of the restored slope in the future.

- g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

No change in impervious surfaces will occur.

- h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any:

A series of compost socks will be employed to capture sediment. Exposed soils on the slope will be covered with arborist mulch to allow restoration plantings time to mature.

2. AIR

- a. What types of emissions to the air would result from the proposal (i.e. dust, automobile odors, and industrial wood smoke) during construction and when the project is completed? If any, generally describe and give approximate quantities if known.

Exhaust from equipment and construction vehicles during construction may be emitted. No new air emissions will result from the project once completed.

- b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

None known.

- c. Proposed measures to reduce or control emissions or other impacts to the air, if any:

Not applicable. All construction vehicles will meet state emission standards.

3. WATER

- a. Surface

(1) Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

The project is in the Newport Area drainage basin. Floodplain presumably associated with Newport Creek is mapped at the very eastern end of the parcel, at the bottom of the steep slope. However, City mapping shows Newport Creek originating north of the project parcel. Newport Creek is a tributary to Coal Creek. It enters the creek just upstream of the crossing under I-405.

No above ground channel was evident at the time of our visit.

- (2) Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If Yes, please describe and attach available plans.

No.

- (3) Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.

No fill and dredge material will be placed in or removed from surface water or wetlands. Fill will be removed from the steep slope buffer area.

- (4) Will the proposal require surface water withdrawals or diversions? Give general description, purpose, and approximate quantities if known.

No.

- (5) Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.

A floodplain is mapped at the eastern edge of the property, however, no work is proposed in the floodplain.

- (6) Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.

No discharge of waste materials to surface waters will occur.

b. Ground

- (1) Will ground water be withdrawn, or will water be discharged to ground water? Give general description.

No ground water will be withdrawn and no water will be discharged to ground water as a result of this project.

- (2) Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (for example: Domestic sewage; industrial, containing the following chemicals...; agricultural; etc.) Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.

No waste material will be discharged into the ground.

c. Water Runoff (Including storm water)

- (1) Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.

Stormwater from the site will continue to flow down the steep slope at the eastern side of the property. However, new native vegetation will provide improved infiltration of stormwater between the house and the slope. The four-foot retaining wall will include proper drainage capabilities, otherwise no new stormwater improvements are proposed.

- (2) Could waste materials enter ground or surface waters? If so, generally describe.

No.

- d. Proposed measures to reduce or control surface, ground, and runoff water impacts, if any:

No additional measures are necessary.

4. Plants

- a. Check or circle types of vegetation found on the site:

- ☐ deciduous tree: alder, maple, aspen, other
☒ evergreen tree: fir, cedar, pine, other
☐ shrubs
☒ grass
☐ pasture
☐ crop or grain
☐ wet soil plants: cattail, buttercup, bulrush, skunk cabbage, other
☐ water plants: water lily, eelgrass, milfoil, other
☒ other types of vegetation

Virtually no vegetation is currently present in the recently filled area behind the wall. Down slope of the wall a conifer forest is present with limited understory and ivy on many of the trees. Photographs show the impacted area consisted predominately of grass, ivy and one apple tree prior to impact.

- b. What kind and amount of vegetation will be removed or altered?

Ivy will be removed on the slope behind the retaining wall. The project does not necessitate the removal of any other vegetation, however selective thinning is recommended for the saplings on the forested slope behind the wall in order to improve the health of the conifer forest and allow for the planting of understory vegetation as restoration for project impacts.

- c. List threatened or endangered species known to be on or near the site.

No threatened or endangered species are known to be on or near the site.

- d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any:

A restoration planting plan is proposed which includes 709 square feet of native shrub and groundcover planting in the re-graded buffer area above the wall. Below the wall, additional enhancement of up to 3,318 square feet of the forested slope will take place through sapling thinning, understory shrub planting and invasive species removal which will improve structural and species diversity and enhance wildlife habitat. Species proposed for installation include vine maple, nootka rose, beaked hazelnut, snowberry, kinnikinnick, sword fern and Oregon grape.

5. ANIMALS

- a. Check or circle any birds and animals which have been observed on or near the site or are known to be on or near the site:

- ☒ Birds: hawk, heron, eagle, songbirds, other:
☐ Mammals: deer, bear, elk, beaver, other:
☐ Fish: bass, salmon, trout, herring, shellfish, other:

- b. List any threatened or endangered species known to be on or near the site.

No threatened or endangered species are known to be on or near the site.

- c. Is the site part of a migration route? If so, explain.

No migration routes are known to occur through the site.

- d. Proposed measures to preserve or enhance wildlife, if any:

Native restoration plantings will provide additional cover and foraging opportunities for wildlife.

6. Energy and Natural Resources

- a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy need? Describe whether it will be used for heating, manufacturing, etc.

The project will not create any new energy needs.

- b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

The project will not affect potential solar energy use.

- c. What kinds of energy conservation features are included in the plans of the proposal? List other proposed measures to reduce or control energy impacts, if any:

No energy conservation features are necessary.

7. Environmental Health

- a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur as a result of this proposal? If so, describe.

No.

- (1) Describe special emergency services that might be required.

None necessary.

- (2) Proposed measures to reduce or control environmental health hazards, if any.

None necessary.

b. Noise

- (1) What types of noise exist in the area which may affect your project (for example, traffic, equipment, operation, other)?

Typical residential noise occurs on the property. No noise is expected to affect the project.

- (2) What types and levels of noise would be created by or associated with the project on a short-term or long-term basis (for example, traffic, construction, operation, other)? Indicate what hours noise would come from the site.

The project will not create any new noise other than minor construction noise during modifications to the wall. Construction will occur during normal daytime hours.

- (3) Proposed measures to reduce or control noise impacts, if any:

No measures necessary.

8. Land and Shoreline Use

- a. What is the current use of the site and adjacent properties?

The site is a residential property with a single family residence and appurtenant features. It is surrounded by other single family residential properties.

- b. Has the site been used for agriculture? If so, describe.

No.

- c. Describe any structures on the site.

The site contains a single family residence with attached garage and patio, and a storage shed. Currently an approximately 10-foot-high cement retaining wall and board fence is present behind the house which will be modified under this proposal.

- d. Will any structures be demolished? If so, what?

The retaining wall will be lowered to 4 feet and the board fence removed.

- e. What is the current zoning classification of the site?

The parcel is zoned R-5.

- f. What is the current comprehensive plan designation of the site?

The comprehensive plan designation of the site is Single Family High Density (SF-H), up to 5 units per acre.

- g. If applicable, what is the current shoreline master program designation of the site?

Not applicable.

- h. Has any part of the site been classified as an "environmentally sensitive" area? If so, specify.

Yes, a steep slope geohazard area is present on site.

- i. Approximately how many people would reside or work in the completed project?

Not applicable.

- j. Approximately how many people would the completed project displace?

The project will not displace any people.

- k. Proposed measures to avoid or reduce displacement impacts, if any:

Not applicable.

- i. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any:

Not applicable. The project will not change the existing land use.

9. Housing

- a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

Not applicable. No new housing units will be provided.

- b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

Not applicable. No housing will be eliminated as a result of the project.

- c. Proposed measures to reduce or control housing impacts, if any:

Not applicable.

10. Aesthetics

- a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

The cement retaining wall will be 4 feet tall.

- b. What views in the immediate vicinity would be altered or obstructed?

No views will be significantly altered. The current wall and fence may infringe on the neighboring properties view of the forested slope behind the houses. Lowering the wall will reduce this possibility.

- c. Proposed measures to reduce or control aesthetic impacts, if any:

None needed.

11. Light and Glare

- a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

No new light or glare will be produced by the project.

- b. Could light or glare from the finished project be a safety hazard or interfere with views?

Not applicable.

- c. What existing off-site sources of light or glare may affect your proposal?

No off-site sources of light will affect the proposal.

- d. Proposed measures to reduce or control light or glare impacts, if any:

Not applicable.

12. Recreation

- a. What designated and informal recreational opportunities are in the immediate vicinity?

Lake Heights Park which connects to the Coal Creek Natural Area is present just east of the parcel. Newport Heights Elementary School which has ballfields, is located across the street.

- b. Would the proposed project displace any existing recreational uses? If so, describe.

No.

- c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:

Not applicable.

13. Historic and Cultural Preservation

- a. Are there any places or objects listed on, or proposed for, national, state, or local preservation registers known to be on or next to the site? If so, generally describe.

None known.

- b. Generally describe any landmarks or evidence of historic, archeological, scientific, or cultural importance known to be on or next to the site.

Not applicable.

- c. Proposed measures to reduce or control impacts, if any:

Not applicable.

14. Transportation

- a. Identify public streets and highways serving the site, and describe proposed access to the existing street system. Show on site plans, if any.

The site is accessed off of 119th Ave SE. Site access will not change as a result of this proposal.

- b. Is site currently served by public transit? If not, what is the approximate distance to the nearest transit stop?

Yes, there is a bus stop at 119th Ave SE and SE 52nd Street, approximately 0.1 miles north of the site.

- c. How many parking spaces would be completed project have? How many would the project eliminate?

Not applicable. The project will not add or eliminate parking spaces.

- d. Will the proposal require any new roads or streets, or improvements to existing roads or streets, not including driveways? If so, generally describe (indicate whether public or private).

No. No transportation infrastructure improvements are required as a result of this project.

- e. Will the project use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

No.

- f. How many vehicular trips per day would be generated by the completed project? If known, indicate when peak volumes would occur.

Not applicable. The completed project will not generate any new vehicular trips.

- g. Proposed measures to reduce or control transportation impacts, if any:

Not applicable.

15. Public Services

- a. Would the project result in an increased need for the public services (for example: fire protection, police protection, health care, schools, other)? If so, generally describe.

No, the project will not result in an increased need for public services.

- b. Proposed measures to reduce or control direct impacts on public services, if any:

Not applicable.

16. Utilities

- a. Circle utilities currently available at the site: electricity, natural gas, water, refuse service, telephone, sanitary sewer, septic system, other.

- b. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.

Not applicable. No utilities are proposed for the project.

Signature

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.

Geotechnical Consultation (2)
Residential Site Stabilization Wall
5402 – 119th Avenue SE
Bellevue, Washington
Job: Bryant.119thAvSE.L2

At your request, we revisited your property to observe the constructed concrete retaining wall in the rear upper portion of your property. We understand that following our 2011 site visit that identified slope stability issues related to a failed City of Bellevue storm drainage line located on the north side of your property, the City repaired the failed storm line. However, the City did not restore or stabilize the adjacent soil settlement areas on your or your neighbors properties or the ground ruptures that extended into the slope area and landscape walls below.

We further understand that following the repair of the storm line, settlement and ground movement continued in these areas, as we expected and discussed, because of the adjusting disturbed soil conditions around the pipe and on the slope. We also understand that you and your neighbor filled the settlement depressions and ground ruptures with soil material for some time after the repair of the utility line. Because the soils in the rear portion of your lawn area and slope continued to settle, you were required to take further measures to stabilize the area, thus the concrete retaining wall - a significant expense. Based on our recent discussions, as you prepared to install the wall, you decided to extend the wall the remaining distance to the south property line, thus stabilizing the slope on your property, and provide the opportunity to re-level the rear portion of your yard.

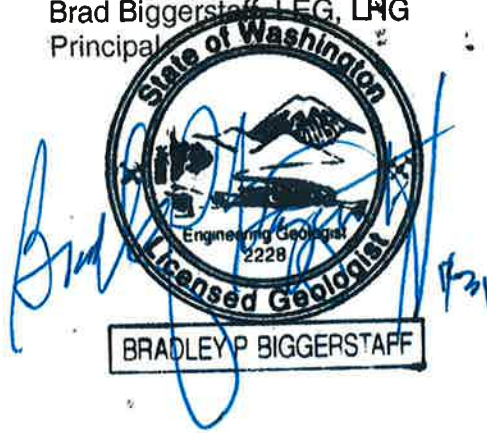

We understand that the wall contractor neglected to acquire the necessary permits from the City, and you have been advised of the violation with a "Stop Work" order from the City, and "Order of Corrective Action". This would seem somewhat incongruous as the necessity of the slope repair and stabilization wall were the result of a failed City utility line. And although they did repair the leaking/piping storm line, they did not remediate the damage to the adjacent properties.

Relative to the two "options" provided by the City to rectify the corrective action and remove the stop work, both require the removal of the existing concrete retaining wall? It should be noted that the wall, although located in the buffer area, is not in the steep slope area. Further, no significant trees were removed or damaged during the installation of the wall. A single small apple tree was removed for equipment access. It is obvious that care was taken to protect the slope area below, and the vegetation. Removal of the existing wall would certainly damage the vegetation and result in a significant exposed soils area with a severe erosion potential. AND return the slope area to the previous unstable condition, that resulted because of the failed utility line. We recommend that the wall remain in its current configuration and that the typical erosion control be allowed to be finished (landscaping).

We trust this information is sufficient for your needs. If you have any questions, or require additional information, please contact us.

Respectfully submitted,

Science & Design

1. FILL SOCK WITH COMPRESSED MATERIAL (PER VAC 735-35-220) TO STABILIZE SOCK. SOCK SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK.
 2. BRIDGEMOUNTABLE MESH NETTING IS PLACED OVER THE SOCK. THE SOCK SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK.
 3. ANCHORING PLACE STAKES ON THE DOWNWIND SIDE OF THE SOCK ON THROUGH THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK.
 4. ANCHORING PLACE STAKES ON THE DOWNWIND SIDE OF THE SOCK ON THROUGH THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK.
 5. HEAVY VEGETATION AND EXTREMELY UNDEVELOPED SURFACES SHOULD BE CONTACTED THE GROUND SURFACE. PLACEMENT MAY BE MODIFIED FROM THE PLAN WITH APPROVAL. AFTER THE RESTORATION CONSULTANT
 6. LOOSE COMPOST MAY BE BACKFILLED ALONG THE UPSLOPE SIDE OF THE SOCK TO FILL THE GASH BETWEEN THE SOIL SURFACE AND THE SOCK.
- MAINTENANCE STANDARDS:**
1. INSPECT SOCKS REGULARLY, AND AFTER EACH RAINFALL EVENT, TO DETERMINE IF THE SOCK IS STABILIZED. THE SOCK SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK.
 2. IF THERE IS EXCESSIVE PONING DURING THE SOCK OR ACCUMULATED SEDIMENTS REACH THE TOP OF THE SOCK, NOTIFY THE RESTORATION CONSULTANT TO VERIFY WHETHER OR NOT IN FRONT OF THE EXISTING SOCK IN THESE AREAS, WITHOUT DISTURBING THE ACCUMULATED SEDIMENT, OR
 3. IF SEDIMENT SHOULD BE REMOVED, REMOVE THE AREA HAS BEEN STABILIZED, VERIFY WITH THE RESTORATION CONSULTANT.
 4. IF THE SOCK IS NOT STABILIZED, REMOVE THE SOCK AND RE-INSTALL THE SOCK IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK. THE SOCK END SHOULD BE PLACED IN THE CENTER OF THE SOCK.
 5. IF ANY SEDIMENT BUILDUP IS LEFT IN PLACE OR REMOVED, REMOVE IT.
 6. IF RE-VEGETATION OF SITE IS NECESSARY, RE-VEGETATE THE SITE.
